## IT tools

**AI - Poker Agent:** Developed an AI poker agent that builds a game tree and uses neural networks to evaluate leaf nodes, enabling intelligent gameplay. While playing, the algorithm learns more and more about the perfect strategy for playing poker against the current opponents.

**Product Return System:** Users can register a return of a product. Administrators can login to the system and manage returns. The project is built with a frontend built with View and backend is built with Node.js. The project uses a noSQL database to store data.

**Friendly Bet:** A web application for creating and managing friend-to-friend bets, built with React, Node.js, and Express. The application uses a noSQL database to store user data and bets. The application is built with a focus on user experience and simplicity.

**Train Database:** A SQL database for the Norwegian railway, written in SQLite3 and accessed with python.
